

CHARGING INSTRUCTIONS

FOR GREENMAN ENERGY FAST CHARGING STATIONS

(Alpitronic Hypercharger)

1

Preparation

- Open the charging flap of the vehicle and remove the protective cap from the charger.
- Remove the plug from the charging socket of the charging station and connect it to the vehicle.

2

Authentication

- **Variante 1:** Hold the RFID charging card in front of the charging station's integrated card reader and select the plug being used on the display.
- **Variante 2:** Scan the available QR code with your smartphone.
- Charging process starts automatically after authentication is successful.

3

Charging

- The edge of the charging socket lights up as soon as charging starts.
- The display shows various information about the charging process.

4

Ending Your Charge

- **Variante 1:** Hold the RFID charging card in front of the card reader. End the charging process by clicking the 'Stop' button.
- **Variante 2:** Terminate via interchange direct.
- **Variante 3:** Some vehicles allow the plug to be released by unlocking it from the vehicle. This ends the charging process and the plug can be removed.

5

Final Steps

- Remove the cable from the vehicle and return it to the charging station.
- Place the protective cap on the vehicle's plug connection and close the charging flap.
- Remove the vehicle from the charging car park when charging is complete.
